The following features are exemplary: multiple separate controlling systems, that can each promote a growth or health of living organisms by controlling at least a light irradiated on the living organisms, each controlling system being a separate and independent research source that collaboratively is interconnected to perform research on a common research project and an information processing system that is communicably connected with each of the separate controlling systems to enable the collaborative research to be distributed to each of the multiple separate controlling systems, wherein the each of the multiple controlling systems includes an environment controlling unit including at least a light irradiating unit for providing light of a characteristic to promote growth of a specific living organism, the information processing system includes an environmental data

receiving part that receives relevant environmental data which is data concerning an environment of the living organism including data on the light which will promote a growth or health of the living organism received from at least a first controlling system to enable an advancement of collaborative research information; an environmental data administrating part that administers the environmental data received by the environmental data receiving part to provide a communicable format of environmental data that can be distributed by the information processing systems to the other separate controlling systems; an environmental data delivering part that obtains the environmental data administered by the environmental data administrating part and delivers the environmental data at least from the first controlling system to a second controlling system in the multiple separate controlling systems when the environmental data delivering part receives an environmental data request signal from the second controlling system to deliver the environmental data from the first controlling system to the second controlling system; a royalty data producing part that produces royalty data to determine a value to be received in return for disclosing the environmental data originally produced by any of the multiple separate controlling systems including the first controlling system to any of the multiple separate controlling systems including the second controlling system, in relationship to a controlling system identifier that identifies one of the controlling systems when the environmental data is received or delivered; a state data receiving part that receives state data including image data of living organisms and a state of a midstream process; a state data administrating part that administers the state data received by the state data receiving part; a state data

delivering part that delivers a part or all of the state data administered by the state data administrating part to the at least second controlling system; and an assessment data obtaining part that obtains the assessment data showing an assessment of an effectiveness and uniqueness of the environmental data administered by the environmental data administrating part, wherein the royalty data producing part produces the royalty data which is based on a content of the assessment data obtained by the assessment data obtaining part to determine a royalty value for the data, wherein each of the multiple separate controlling systems can deliver and/or receive data that promotes a growth or health of a living organism in return for a royalty payment from the information processing system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
